Mountain Weather Forecast

Brecon Beacons National Park

Forecast valid from 06:00 on Monday 20 Dec 2021 until 23:59 on Tuesday 21 Dec 2021

Forecast Issued on Monday 20 Dec 2021 at 00:41

Confidence: High pressure remains firmly in charge over the next few days bringing dry and settled conditions, although there is some uncertainty over the extent of cloud cover. Lower confidence for details from Wednesday as low pressure approaches.

Headline for Monday 20 Dec 2021: Dry, chilly and often overcast away from the more sheltered west.

Forecast for Monday 20 Dec 2021

Weather: In general a much cloudier day compared to Sunday as easterly winds bring areas of hill fog across all parts. West facing slopes may see a few cloud breaks through the day. Cloud will slowly lift through afternoon, eventually breaking into the evening to leave increasingly clear skies.

Chance of cloud free mountain/hill tops above 600m: 10% improving 30%.

Visibility: Fog patches may develop in the valleys, these slow to clear through morning. Otherwise, visibility will be entirely dictated by the height of the main cloud base which through morning will sit widely around 300-400m, bringing very poor visibility before rising towards 600-700m through afternoon. No issues on lower slopes with good visibility here.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Rather dull with persistent cloud across the hills being the main feature of the day which will give tricky navigation conditions. Note summit temperatures at or below freezing.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
03:00 on Mon 20 Dec 2021	0.2mm	0.2mm	0.4mm

Forecast for Tuesday 21 Dec 2021

Weather: Whilst there is some uncertainty over the extent of cloud cover, this is expected to be much less extensive compared to Monday which should give some lengthy spells of sunshine. High cloud will tend to build later in the day to turn sunshine hazy. Dry through evening.

Maximum wind: Southeast 10-15mph.

Chance of cloud free mountain/hill tops above 600m: 80%.

Visibility: Low level cloud is not expected to feature to any great extent, although a few areas are possible in the 300-500m range, mainly through morning. Away from these, distant landmarks will be clearly visible.

Temperature: **Valleys:** Plus 2 to 4 Celsius.
At 600m: Around freezing.
Freezing level: 200-400m.
